AttritionAssignmentSolution

Step1 - Launching

```
import pandas as pd

import numpy as np

import matplotlib.pyplot as plt

dataset1=pd.read_csv(‘1.csv')

dataset1.head()

Out[41]:

Age Attrition ... YearsSinceLastPromotion
YearsWithCurrManager

0 51 No ... 0 0

1 31 Yes ... 1 4

2 32 No ... 0 3

3 38 No ... 7 5

4 32 No ... 0 4

[5 rows x 24 columns]

dataset1.columns

Out[7]:

Index(['Age', 'Attrition', 'BusinessTravel',
'Department', 'DistanceFromHome',

       'Education', 'EducationField',
'EmployeeCount', 'EmployeeID', 'Gender',

       'JobLevel', 'JobRole', 'MaritalStatus',
'MonthlyIncome',
```

```
       'NumCompaniesWorked', 'Over18',
'PercentSalaryHike', 'StandardHours',
       'StockOptionLevel', 'TotalWorkingYears',
'TrainingTimesLastYear',
       'YearsAtCompany', 'YearsSinceLastPromotion',
'YearsWithCurrManager'],
      dtype='object')
```

Step 2 - Data Treatment:

```
dataset1.isnull()
Out[47]:
Age Attrition ... YearsSinceLastPromotion
YearsWithCurrManager
0 False False ... False False
1 False False ... False False
2 False False ... False False
3 False False ... False False
4 False False ... False False
... ... ... ... ...
4405 False False ... False False
4406 False False ... False False
4407 False False ... False False
4408 False False ... False False
4409 False False ... False False
[4410 rows x 24 columns]
dataset1.duplicated()
Out[50]:
```

0 False

1 False

2 False

3 False

4 False

4405 True

4406 True

4407 True

4408 True

4409 False

Length: 4410, dtype: bool

dataset1.drop_duplicates()

Out[53]:

Age Attrition ... YearsSinceLastPromotion YearsWithCurrManager

0 51 No ... 0 0

1 31 Yes ... 1 4

2 32 No ... 0 3

3 38 No ... 7 5

4 32 No ... 0 4

... ...

3818 28 Yes ... 0 0

3910 41 No ... 1 2

4226 36 No ... 0 0

4395 40 No ... 4 7

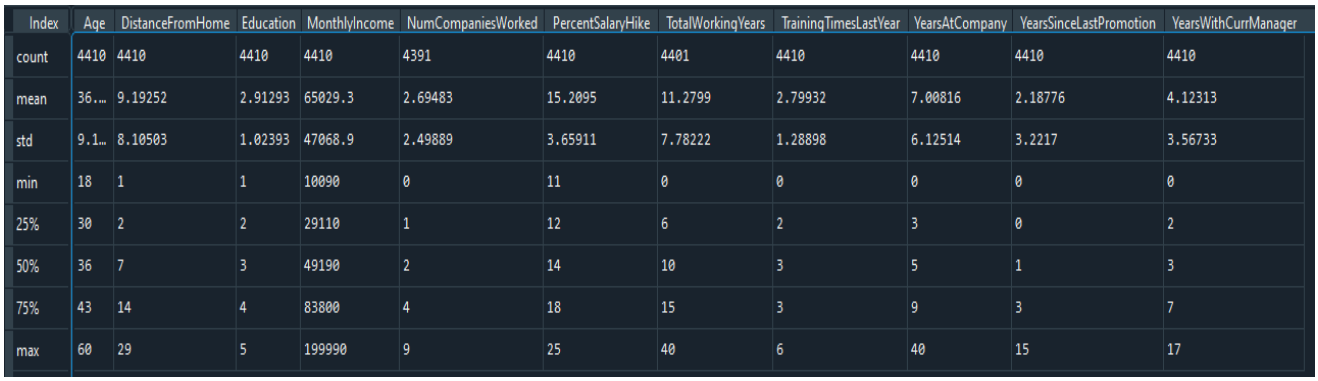
4409 40 No ... 3 9

[4410 rows x 24 columns]

Step 3 – Univariate Analysis:

```
dataset3=dataset1[['Age','DistanceFromHome','Educat
ion','MonthlyIncome', 'NumCompaniesWorked',
'PercentSalaryHike','TotalWorkingYears',
'TrainingTimesLastYear',
'YearsAtCompany','YearsSinceLastPromotion',
'YearsWithCurrManager']].describe()
```

Dataset3



Index	Age	DistanceFromHome	Education	MonthlyIncome	NumCompaniesWorked	PercentSalaryHike	TotalWorkingYears	TrainingTimesLastYear	YearsAtCompany	YearsSinceLastPromotion	YearsWithCurrManager
count	4410	4410	4410	4410	4391	4410	4401	4410	4410	4410	4410

'TrainingTimesLastYear',
'YearsAtCompany','YearsSinceLastPromotion',
'YearsWithCurrManager']].kurt()
```

Dataset3

	Mean	Median	Mode	Variance	Std Deviation	IQR	Skewness	Kurtosis
Mean Age (Yrs)	36	36	35	83.14	9.1	13	0.418	-0.4
Mean Distance from Home (Kms)	9	7	2	65.69	8.1	2	0.957	-0.22
Mean Monthly Income (Rs)	65000	49190	23420	2215480000	47068	54000	1.36	1
Mean Work Experience (Yrs)	11.29	10	10	60	7.72	9	1.11	0.91
Mean Years at Company (Yrs)	7	5	5	37.51	6.12	6	1.76	3.92
Mean Years since last promotion (Yrs)	2	1	0	10.37	3.22	3	1.98	3.6
Mean Years with Current Manager (Yrs)	4	3	2	12.72	3.56	5	0.83	0.16

Inference from the analysis:

 All the above variables show positive skewness; while Age & Mean_distance_from_home are leptokurtic and all other variables are platykurtic.

 The Mean_Monthly_Income’s IQR is at 54K suggesting company wide attrition across all income bands

 Mean age forms a near normal distribution with 13 years of IQR

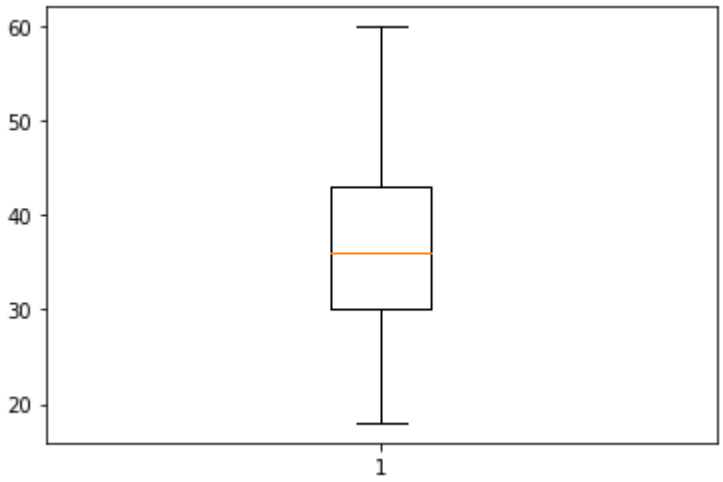
Outliers:

There’s no regression found while plotting Age, MonthlyIncome, TotalWorkingYears, YearsAtCompany, etc., on a scatter plot

```
box_plot=dataset1.Age

plt.boxplot(box_plot)
```

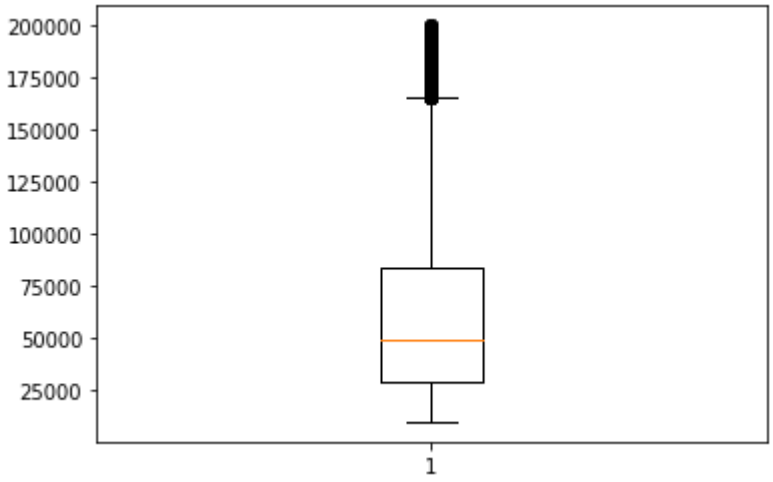
Out[23]:



Age is normally distributed without any outliers

```
box_plot=dataset1.MonthlyIncome

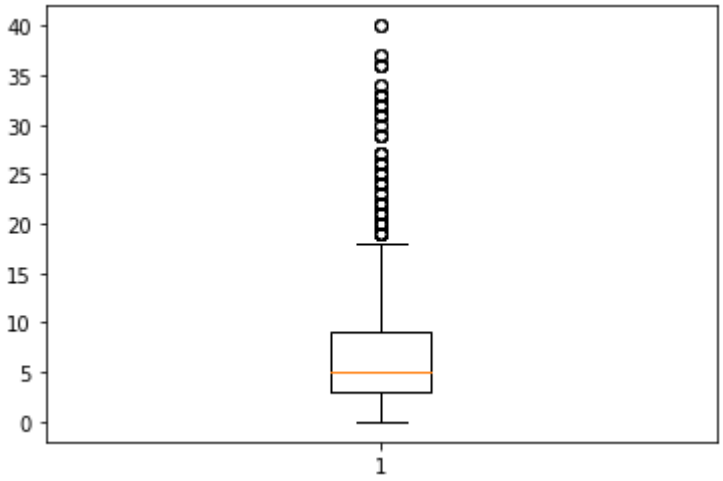
plt.boxplot(box_plot)
```



Monthly Income is Right skewed with several outliers

```
box_plot=dataset1.YearsAtCompany

plt.boxplot(box_plot)
```



Years at company is also Right Skewed with several outliers observed.
